DETAILED ACTION

1. This communication is responsive to the applicant's amendment dated 08/20/2007.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by McIntosh (US-6,278,786).

Regarding claims 10-11, McIntosh discloses an active noise cancellation headset system. McIntosh's disclosure comprises a method of allowing a plurality of headphones having different acoustic properties to provide noise cancellation with a noise cancellation circuit operable over a predetermined phase range of noise cancellation input signals (the noise canceling headset system of McIntosh is capable of use for different headphones that including its own earcup speakers and error microphones that is considered with different acoustic properties as shown in Fig. 8), the method including the step of: providing at least one of the headphones with a passive filter (conventional compensation filter H_{comp} in Fig. 3 is a nonadaptive filter that can be considered as the broadly claimed passive filter) configured to modify the output

Art Unit: 2615

of a sound transducer (12) associated with the at least one headphone so that the filter provides a noise cancellation input signal for the noise cancellation circuit which is within the predetermined phase range.

Regarding claim 11, see col. 4, line 60-col. 5, line 7 for determining the operating condition of the passive filter based on the monitoring condition of a microphone (18) error signal within the headset, i.e., an acoustic property of a selected headphone as claimed.

Regarding claim 12, a feedback signal provided by a microphone 18 is appropriately conditioned or normalized by filter H_{comp} for a generic active noise cancellation circuit (i.e., ANC components such as 22, DSP, 24, and anti-noise speaker 16 as shown in Fig. 3).

Allowable Subject Matter

4. Claims 1-6 and 9 allowed over prior art of record.
